

3.1 SUCCESSION - POGIL (PART 1)

NAME: _____

OBJECTIVE: Investigate how communities develop differently over time.

On May 16, 1880, Mount St. Helens in the state of Washington erupted with the force of a nuclear bomb. The volcano had been dormant for over 125 years, but now it erupted with deaf and fury, and left a new "bald" landscape, including many Spirit Lake, which became a mud flat. The high hydrothermal activity over 2000m from the crater and ash deposits killed all life on the mountain. However, some seeds, mammals that had taken shelter underground, and fish in the lake, and ferns, that they were later, many areas of the mountain are intended with a large variety of dead and dying life. How soon do you think from a single, barren wilderness to one full of life?

MODEL 1. PRIMARY SUCCESSION

1. Bare rock: No plants or animals are present. Only rocks and soil are visible.

2. Pioneer species: Small, hardy plants like lichens and mosses are the first to grow on the bare rock.

3. Intermediate species: As soil builds up, a variety of grasses and shrubs take root.

4. Late successional species: Larger trees and more complex plants begin to grow.

5. Climax community: A stable, diverse ecosystem with a variety of trees and plants.

1. Answer the Whisked 1:

- On what type of land does primary succession first begin to occur?
- Which of the plants appear to be the most hardy? Why are the first plants primary succession first to appear?
- Why would some plants with no stems and moss find it difficult to grow here?

2. Answer the Whisked 2 in Whisked 2:

- What are the first organisms colonizing on this land?
