Ball Python Care Breeding And

Ball pythons are "cycled" before breeding. As in nature, seasonal temperature and light changes inform the snakes instinctively that it's time to breed and these must be replicated in a captive environment. Normally, this process begins in October. When cycling, the cold spot of the ball python's enclosure can drop to 72-75°F and the hot spot 82-85°F. Near the equator, the hours of daylight don't typically change as drastically as they do in some parts of the world, like Canada. Some ...

In their native habitat, the ball python's diet consist of small mammals (e.g. shrews, rats) and birds. They strike to catch their prey with their mouths and then quickly coil around and constrict them. It is recommended to feed your python rats as they range in size and medium-sized rats are sufficient for an adult.

To breed ball pythons, you need to get the necessary equipment. This includes an egg box, perlite or vermiculite substrate, and an incubator. To avoid health problems, make sure that your ball pythons are old enough and large enough to breed before you attempt to get them to mate.

A Complete Ball Python Breeding Guide for Beginners

Ball pythons reach sexual maturity in 3-5 years and have a 15-30 year lifespan in captivity. They are known for their incredible genetic diversity; part of their current popularity is due to a fad for producing "morphs": variations in color and pattern. Many experienced hobbyists take on ball python breeding as a study in snake genetics.

Le Python royal (Python regius) est une espèce de serpents de la famille des Pythonidae [1]. C'est le plus petit des pythons africains et un animal de compagnie populaire. Aucune sous-espèce n'est reconnue à ce jour [2]. C'est un serpent constricteur, on lui donne le nom vernaculaire de Python royal ou encore Python boule. Le premier lui viendrait du fait que la reine Cléopâtre aurait eu ...
