This current varying in parallel circuits brought about Kirchoff's next big law in basic electrical engineering, Kirchoff's Current Law (KCL). This law basically states that current into a node will equal the current out of the node. In other words, the net current in a node is zero or  $0 = I(\text{in}) - I(\text{out})$ . Looking at the node (connection between two loops) in the diagram below, we already know that to be true:  $0 = 29.23\text{mA} - (11.63\text{mA} + 17.6\text{mA})$ .
