CHAPTER 2 OPERATING SYSTEM
OVERVIEW

ANSWERS TO QUESTIONS

- 2.1 Convenience:** An operating system makes a computer more convenient to use. **Efficiency:** An operating system allows the computer system resources to be used in an efficient manner. **Ability to evolve:** An operating system should be constructed in such a way as to permit the effective development, testing, and introduction of new system functions without interfering with service.
- 2.2** The kernel is a portion of the operating system that includes the most heavily used portions of software. Generally, the kernel is maintained permanently in main memory. The kernel runs in a privileged mode and responds to calls from processes and interrupts from devices.
- 2.3** Multiprogramming is a mode of operation that provides for the interleaved execution of two or more computer programs by a single processor.
- 2.4** A process is a program in execution. A process is controlled and scheduled by the operating system.
- 2.5** The **execution context**, or **process state**, is the internal data by which the operating system is able to supervise and control the process. This internal information is separated from the process, because the operating system has information not permitted to the process. The context includes all of the information that the operating system needs
